

Objectives

- To develop a simple calculator using Python.
- To practice **arithmetic operators** such as +, -, *, /, and %.
- To understand **functions and conditional statements**.
- To handle user input effectively.
- To prevent errors such as **division by zero**.
- To display calculation results clearly.

Key Features

1. **Addition** — Adds two numbers.
2. **Subtraction** — Subtracts the second number from the first.
3. **Multiplication** — Multiplies two numbers.
4. **Division** — Divides the first number by the second.
5. **Modulus** — Returns the remainder after division.
6. **Division-by-zero protection** — Prevents runtime errors.
7. **Invalid input handling** — Displays an error when non-numeric input is entered.
8. **Continuous operation** — The calculator can perform multiple calculations until the user selects Exit.
9. **Clean console interface** — Uses headings, separators, and clearly numbered options.
10. **Separate functions** — Each arithmetic operation is implemented independently.

Technologies Used

Python 3

Conditional Statements

Input/Output

Exception Handling

=====

Choose an operation:
1. Addition      (+)
2. Subtraction   (-)
3. Multiplication (*)
4. Division      (/)
5. Modulus       (%)
6. Exit

-----
Enter your choice (1-6): 3
Enter first number : 678
Enter second number: 9000

-----
Result: 678 * 9000 = 6.102e+06
-----

Choose an operation:
1. Addition      (+)
2. Subtraction   (-)
3. Multiplication (*)
4. Division      (/)
5. Modulus       (%)
6. Exit
```

The screenshot shows a GitHub commit page for the repository 'shambhavi0804 / VEDA-internship'. The commit is titled 'Add day 3 calculator program' and was made by 'shambhavi0804' 1 minute ago. The commit hash is '52ba4c7'. Below the commit information, there is a file named 'calculator.py' which has been changed. The file content is a JavaScript program for a calculator. It includes functions for addition, subtraction, multiplication, and division, along with a main function that prompts the user for an operation and performs the calculation. The code is as follows:

```
